

PANKAJ THAKUR

SDE-2 Frontend Developer | MERN Stack

Himachal Pradesh, India • +91 8708583401 • pankajthakur1713@gmail.com • linkedin.com/in/pankzthakur

PROFESSIONAL SUMMARY

MERN Stack Developer with 3+ years of experience building scalable, performance-driven web applications. Self-taught engineer who transitioned from Mechanical Engineering into software development — bringing a structured, systems-thinking approach to frontend architecture. Currently at MobilePe (fintech), leading frontend development using React.js, Next.js, and Node.js. Experienced in delivering OTT platforms, real-time LMS systems, and booking applications serving thousands of concurrent users. Strong focus on Core Web Vitals, micro-frontend architecture, and cross-functional team collaboration.

TECHNICAL SKILLS

Frontend: React.js, Next.js, JavaScript (ES6+), TypeScript, Micro-frontend

Backend: Node.js, Express.js

State Management: Redux Toolkit

Database: MongoDB, Mongoose

Styling: Tailwind CSS, Material UI, SASS

APIs & Realtime: REST APIs, JWT Authentication, WebSockets

Performance: Core Web Vitals (LCP/FCP/CLS), Bundle Optimization, Lazy Loading

CI/CD & DevOps: AWS, Ubuntu, PM2, Git, Bitbucket, GitLab, CI/CD pipelines

Testing: Unit testing, integration testing

Tools: Postman, Figma collaboration, Jira, cross-functional delivery

PROFESSIONAL EXPERIENCE

SDE-2 Frontend Developer — MobilePe (Noida) | Mar 2026 – Present

- Leading frontend development for 3 core fintech products serving 50,000+ active users, collaborating cross-functionally with backend, design, and product teams in bi-weekly sprints.
- Architected a reusable component library of 40+ components, reducing average feature development time by ~35% and ensuring design consistency across all products.
- Optimized Core Web Vitals across key user journeys — improved LCP from ~4s to under 1.8s and reduced CLS to 0.05 through code splitting, lazy loading, and image optimization.
- Implemented a CI/CD pipeline using GitLab CI, reducing deployment turnaround from 2 hours to under 20 minutes and cutting production regression incidents by 60%.
- Enforced JWT-based authentication and role-based access patterns for secure fintech flows, passing internal security review without critical findings.
- Introduced unit and integration testing standards for the component library (Jest/RTL), bringing coverage from 0% to 65% and catching 12+ bugs before production.

SDE-2 Frontend Developer — Dev Story (Chandigarh) | Jan 2025 – Feb 2026

- Built an OTT streaming platform (The Short Film Showcase) from scratch using Next.js — custom HLS video player supporting 10,000+ monthly viewers with adaptive bitrate delivery.
- Implemented role-based dashboards and granular access control (5 user roles) using Redux Toolkit and JWT middleware, enabling secure multi-tenant content management.
- Developed a booking and scheduling system handling 500+ daily transactions, integrating payment gateway APIs with real-time status updates via WebSockets.
- Reduced initial page load time by 48% through micro-frontend refactoring, route-based code splitting, and moving to static site generation (SSG) for content-heavy pages.
- Collaborated with a cross-functional team of 8 (designers, backend devs, QA) using Agile/Scrum — consistently delivered sprint commitments with a 94% on-time rate.

SDE-1 Frontend Developer – [C-J Technologies](#) (Mohali) / Nov 2022 – Jan 2025

- Developed and maintained 6 production React applications, improving average Lighthouse performance score from 58 to 84 through systematic refactoring and API caching strategies.
- Integrated 15+ REST APIs with robust error handling, retry logic, and loading states — reducing reported frontend data errors by ~40% within the first quarter.
- Built a real-time notification system using WebSockets that reduced customer support tickets related to delayed updates by 30%.
- Mentored 2 junior developers through code reviews and pair programming sessions, improving team code quality and reducing PR revision cycles by 25%.
- Established a Jest + React Testing Library test suite across 6 production apps, achieving 70%+ coverage on critical user flows and reducing regression bugs by ~30%.
- Contributed to system design discussions for new modules — proposed a normalized MongoDB schema that reduced average query time by 35% for a reporting dashboard.

KEY PROJECTS

The Short Film Showcase – theshortfilmshowcase.com

- OTT platform built with Next.js + Node.js: custom HLS video player, 5-tier RBAC, and subscription management. Serving 10,000+ monthly viewers with 99.5% uptime on AWS.

Oral Envision – dev.oralenvision.com

- Scalable dental practice management frontend; optimized bundle from 2.1MB to 890KB (58% reduction) via tree-shaking and dynamic imports; achieved Lighthouse score of 91.

SkillSouq LMS – dev.skillsouq.ai

- Real-time Learning Management System with WebSocket-powered live classrooms, role-based dashboards for instructors/students, and a React-based video quiz engine.

EDUCATION

B.Tech, Mechanical Engineering – CGC Jhanjeri, Mohali

Self-directed transition into software engineering through hands-on project development and continuous learning (React, Node.js, system design).
